

## EXPERIMENT-9

### AIM:

Create a Snapshot of a VM and Test it by loading the Previous Version/Cloned VM.

### ALGORITHM:

- Open the VMware vSphere Client or VMware Workstation.
- Locate the virtual machine you want to create a snapshot for in the inventory.
- Right-click on the virtual machine and select "Snapshot" > "Take Snapshot."
- Enter a name and description for the snapshot to help identify it later.
- Click "OK" to create the snapshot. VMware will capture the current state of the VM, including memory, disk, and settings.

### OUTPUT:
